8	Silina Raikivi	Nagadoa Bua

Introduction:

WCS is supporting business women in the province of Bua to develop sustainable livelihoods. This training was specifically targeted at rural women running businesses that promote sustainable use of natural resources and who had taken part in Empowerment Training in July 2013.

The training was delivered by Buloulevu Vakataumavi, Training Officer at NCSMED, with the broad aim to provide participants with the tools, techniques, strategies, motivation and confidence to grow their businesses. Additional outcomes that were targeted included enhancing their entrepreneurial skills, identifying and releasing some areas of untapped potential and applying their knowledge in the practical context of developing business plans.

Business Development Skills and Financial Literacy Training helps participants identify goals and provides a roadmap and action plan to achieve them, taking account of the specific challenges they face.

The training had a strong focus on identifying resources and exploring markets for their products. It is based on the fundamental assumption that the ladies will become champions for sustainability in their communities, with a clear vision for their businesses and equipped with the skills to help realize that vision. As such they will act to empower other women in their communities to become active in generating income and contributing to sustainable management of natural resources.

As a result, their communities will experience higher economic growth, appreciation of the role women can play and raised expectations of the shared long-term benefits of income-generating activities.

Above: Women developed their vision for their business and shared the challenges they face.

The 3 days course sought to build an understanding of the basic components of business planning (incorporating a marketing plan, production plan, organization and management plan and financial plan) – leading to the development of individualized own business plans.

It also facilitated the transfer of experience and knowledge between the women, helping them to develop shared local support networks.

The training was conducted in Fijian, in accordance with feedback from participants at the last workshop.

Above: Participants engaged in drafting their business plans and sharing thoughts with their peers

Methodology:

The agenda was adapted from an established training methodology applied across the Small and Medium Enterprise development sector in Fiji. It is primarily based on an Action Learning approach, encouraging participants to ‘learn by doing’ and constantly relating learning points to real-life situations through simulation games, role plays and participative exercises.

Milestones within this process include:

1. **Awareness:** participants examine who they are, clarify their own values and evaluate their own personality, motivation factors, capabilities and personal resource.
2. **Acceptance:** recognition of one’s strengths and weakness (e.g. not everyone can be a leader, but being more creative ,innovative and competent is likely to produce rewards in any area of life).
3. **Goal setting:** where the emphasis is placed on developing the clarity of purpose in one’s short and long term goals.

4. **Strategies or action plan:** developing a plan of how to realize goals, with an action plan setting out steps along the way.
5. **Direct experience:** where the emphasis is on doing. Structure learning Experience where participants go through a series of business simulation games and role plays. This is to help participants experience and reflect on real life business situations.
6. **Transformation and Empowerment:** where the competencies acquired during training come together into a pattern which matches personal strengths and weakness with goals.

In addition the training revolves around five major factors, which helps achieve the stages above.

- 1 The linking of learning with activity
- 2 Providing adequate time and space for processing
- 3 Creating a supporting environment for change
- 4 Be sensitive to the culture , Values and traditional linkage and obligation of participants
- 5 Developing technical competencies in the of business management

The workshop was also attended by the Fiji Development Bank (FDB) Officer in Nabouwalu, who provided a presentation on the availability of financial support.

Outcomes

Participants developed individual business plans with the following components:

- Marketing plan
- Production plan
- Organization and Management Plan
- Financial Plan

Completed business plans (two of which can be found attached to this report) will be submitted to NCSMED for assessment and inclusion on their database. NCSMED will provide links to their office in Labasa as a potential source of future support and assistance.

Training evaluation forms highlighted the value of the workshop in helping participants think about their income and expenses in order to make viable businesses.

Conclusion

The workshop was well received by participants, who valued the quality and content of the programme as well as the effort and approach of the trainer.

Next steps include further support to help the ladies implement their business plans, particularly to establish buyers and improve marketing and packaging and address logistical and other challenges.

Women who complete and return their business plans in time will be sponsored to attend training, meet with potential buyers and sell their products at a market stall at the 9th Pacific Island Conference on Nature Conservation and Protected Areas (in Suva, 2-6 December 2013).
